5 Dec 66

Landed 1800 - good surf,
much more so than usual,
but no problems.

Crew of 7. - Chandler
left on ship w/ infected
ear - probably in prepa-
ration to go to Canton.

July 1881

From the collection of the
American Museum of Natural History
New York City
The following is a list of the
specimens of the genus *Amphispiza*
collected by the author during
his travels in the State of
California. The specimens are
now deposited in the collection
of the American Museum of
Natural History, New York City.
The specimens are as follows:
1. *Amphispiza bilineata* (Aud.)
2. *Amphispiza bilineata* (Aud.)
3. *Amphispiza bilineata* (Aud.)
4. *Amphispiza bilineata* (Aud.)

Sooty Terns

N end of Island

3 disjunct colonies on N end,
one of 50,000, one of 30,000 and
one of 15,000, all close together.

All birds nesting in dense
portulaca cover - W side of
N end. Thousands of eggs
about perimeter of each colony
eaten - possibly Curlew.
all eggs fresh. Several double
clutches noted.

Blue-grey noddy 2 at N end.
